

## TECNICHE DI SCANSIONE CON NMAP

	Macchine Target
SYN Scan	Metasploitable
TCP Connect Scan	Metasploitable
Version Detection	Metasploitable
OS Fingerprint	Metasploitable, Windows 7

Macchine target:

- **Metasploitable**
- **Windows 7**

Tecniche di scansione utilizzate:

- **SYN Scan** (*Stealth Scan*)
- **TCP Connect Scan**
- **Version Detection**
- **OS Fingerprint**

Scanning machine: Kali

- ➔ Tutte e 3 le macchine coinvolte nei test si trovano su rete interna e rispondono positivamente alle echo requests (ping).

### 1. Scansioni su Metasploitable

#### 1.1 SYN Scan

Avviamo la Syn Scan sull'indirizzo IP di Metasploitable eseguendo il comando  
**sudo nmap -sS 192.168.90.101**

```
(kali㉿kali)-[~/Desktop]
$ sudo nmap -sS 192.168.90.101

Starting Nmap 7.93 ( https://nmap.org ) at 2022-11-23 10:43 EST
Nmap scan report for 192.168.90.101
Host is up (0.0031s latency).
Not shown: 977 closed tcp ports (reset)
PORT      STATE SERVICE
21/tcp    open  ftp
22/tcp    open  ssh
23/tcp    open  telnet
25/tcp    open  smtp
53/tcp    open  domain
80/tcp    open  http
111/tcp   open  rpcbind
139/tcp   open  netbios-ssn
445/tcp   open  microsoft-ds
512/tcp   open  exec
513/tcp   open  login
514/tcp   open  shell
1099/tcp  open  rmiregistry
1524/tcp  open  ingreslock
2049/tcp  open  nfs
2121/tcp  open  ccproxy-ftp
3306/tcp  open  mysql
5432/tcp  open  postgresql
5900/tcp  open  vnc
6000/tcp  open  X11
6667/tcp  open  irc
8009/tcp  open  ajp13
8180/tcp  open  unknown

Nmap done: 1 IP address (1 host up) scanned in 13.55 seconds
```

Questo tipo di scansione viene anche definita **Stealth Scan**, in quanto è molto più discreta della TCP Connect: quest'ultima effettua una scansione approfondita ed aggressiva poiché mira ad una connessione completa con la porta target, completando tutti gli step della Three-way handshake (SYN, SYN/ACK, ACK); la SYN Scan, invece, è meno tracciabile dai dispositivi di monitoraggio del traffico di rete (come Firewall) in quanto punta a verificare solamente lo stato della/e porta/e (= aperta o chiusa) dell'host inviando pacchetti di traffico con flag SYN e, alla eventuale risposta positiva di quest'ultimo (SYN/ACK), chiude di fatto la connessione inviando un pacchetto di reset (RST) della stessa.

## 1.2 TCP Connect Scan

Avviamo la TCP Connect Scan eseguendo il comando **sudo nmap -sT 192.168.90.101**

```
(kali@kali)-[~/Desktop]
$ sudo nmap -sT 192.168.90.101
Starting Nmap 7.93 ( https://nmap.org ) at 2022-11-23 10:45 EST
Nmap scan report for 192.168.90.101
Host is up (0.010s latency).
Not shown: 977 closed tcp ports (conn-refused)
PORT      STATE SERVICE
21/tcp    open  ftp
22/tcp    open  ssh
23/tcp    open  telnet
25/tcp    open  smtp
53/tcp    open  domain
80/tcp    open  http
111/tcp   open  rpcbind
139/tcp   open  netbios-ssn
445/tcp   open  microsoft-ds
512/tcp   open  exec
513/tcp   open  login
514/tcp   open  shell
1099/tcp  open  rmiregistry
1524/tcp  open  ingreslock
2049/tcp  open  nfs
2121/tcp  open  ccproxy-ftp
3306/tcp  open  mysql
5432/tcp  open  postgresql
5900/tcp  open  vnc
6000/tcp  open  X11
6667/tcp  open  irc
8009/tcp  open  ajp13
8180/tcp  open  unknown

Nmap done: 1 IP address (1 host up) scanned in 13.56 seconds
```

### 1.3 Version Detection

La Version Detection è una scansione di tipo TCP Connect con aggiunta di specifici **test per la rilevazione dei servizi in ascolto** su una porta. Come la già menzionata scansione TCP Connect, è facile da rilevare perché genera molto traffico di rete. Durante una scansione Version Detection, Nmap esegue prima una TCP Connect e poi recupera informazioni circa il servizio in ascolto dal banner del demone (**banner grabbing**):

```

(kali@kali)-[~/Desktop]
$ nmap -sV 192.168.90.101
Starting Nmap 7.93 ( https://nmap.org ) at 2022-11-23 11:00 EST
Nmap scan report for 192.168.90.101
Host is up (0.0070s latency).
Not shown: 977 closed tcp ports (conn-refused)
PORT      STATE SERVICE        VERSION
21/tcp    open  ftp            vsftpd 2.3.4
22/tcp    open  ssh            OpenSSH 4.7p1 Debian 8ubuntu1 (protocol 2.0)
23/tcp    open  telnet         Linux telnetd
25/tcp    open  smtp           Postfix smtpd
53/tcp    open  domain         ISC BIND 9.4.2
80/tcp    open  http           Apache httpd 2.2.8 ((Ubuntu) DAV/2)
111/tcp   open  rpcbind
139/tcp   open  netbios-ssn    Samba smbd 3.X - 4.X (workgroup: WORKGROUP)
445/tcp   open  netbios-ssn    Samba smbd 3.X - 4.X (workgroup: WORKGROUP)
512/tcp   open  exec           netkit-rsh rexecd
513/tcp   open  login?
514/tcp   open  shell          Netkit rshd
1099/tcp  open  java-rmi       GNU Classpath grmiregistry
1524/tcp  open  bindshell      Metasploitable root shell
2049/tcp  open  rpcbind
2121/tcp  open  ccproxy-ftp?
3306/tcp  open  mysql          MySQL 5.0.51a-3ubuntu5
5432/tcp  open  postgresql     PostgreSQL DB 8.3.0 - 8.3.7
5900/tcp  open  vnc             VNC (protocol 3.3)
6000/tcp  open  X11            (access denied)
6667/tcp  open  irc            UnrealIRCd
8009/tcp  open  ajp13          Apache Jserv (Protocol v1.3)
8180/tcp  open  http           Apache Tomcat/Coyote JSP engine 1.1
Service Info: Hosts: metasploitable.localdomain, irc.Metasploitable.LAN; OSs: Unix, Linux; CPE: cpe:/o:linux:linux_kernel

Service detection performed. Please report any incorrect results at https://nmap.org/submit/ .
Nmap done: 1 IP address (1 host up) scanned in 54.27 seconds

```

## 1.4 OS Fingerprint

Questo tipo di scansione è in grado di restituire in output anche dettagli sul sistema operativo utilizzato dalla macchina target. Scelgo di effettuarla in 2 modi:

- eseguendo il comando **sudo nmap -O 192.168.90.101**

```

(kali@kali)-[~/Desktop]
$ sudo nmap -O -oN report metasploitable.txt 192.168.90.101
[sudo] password for kali:
Starting Nmap 7.93 ( https://nmap.org ) at 2022-11-23 10:34 EST
Nmap scan report for 192.168.90.101
Host is up (0.0025s latency).
Not shown: 977 closed tcp ports (reset)
PORT      STATE SERVICE        VERSION
21/tcp    open  ftp            vsftpd 2.3.4
22/tcp    open  ssh            OpenSSH 4.7p1 Debian 8ubuntu1 (protocol 2.0)
23/tcp    open  telnet         Linux telnetd
25/tcp    open  smtp           Postfix smtpd
53/tcp    open  domain         ISC BIND 9.4.2
80/tcp    open  http           Apache httpd 2.2.8 ((Ubuntu) DAV/2)
111/tcp   open  rpcbind
139/tcp   open  netbios-ssn    Samba smbd 3.X - 4.X (workgroup: WORKGROUP)
445/tcp   open  microsoft-ds   Samba smbd 3.X - 4.X (workgroup: WORKGROUP)
512/tcp   open  exec           netkit-rsh rexecd
513/tcp   open  login          Linux login 4.8.1
514/tcp   open  shell          Netkit rshd
1099/tcp  open  rmi             GNU Classpath grmiregistry
1524/tcp  open  bindshell      Metasploitable root shell
2049/tcp  open  nfs            NFSv3
2121/tcp  open  ccproxy-ftp?
3306/tcp  open  mysql          MySQL 5.0.51a-3ubuntu5
5432/tcp  open  postgresql     PostgreSQL DB 8.3.0 - 8.3.7
5900/tcp  open  vnc             VNC (protocol 3.3)
6000/tcp  open  X11            (access denied)
6667/tcp  open  irc            UnrealIRCd
8009/tcp  open  ajp13          Apache Jserv (Protocol v1.3)
8180/tcp  open  http           Apache Tomcat/Coyote JSP engine 1.1
Device type: general purpose
Running: Linux 2.6.X
OS CPE: cpe:/o:linux:linux_kernel:2.6
OS details: Linux 2.6.15 - 2.6.26 (likely embedded), Linux 2.6.20 - 2.6.24 (Ubuntu 7.04 - 8.04)
Network Distance: 2 hops

OS detection performed. Please report any incorrect results at https://nmap.org/submit/ .
Nmap done: 1 IP address (1 host up) scanned in 16.44 seconds

```

In questo caso ho scelto di creare un piccolo report di riepilogo dei dati ottenuti in output alla scansione, quindi ho aggiunto lo switch **-oN** seguito dal nome del file di testo da creare (**report\_metasploitable.txt**)

**OS info**

- avvalendomi della feature **NMAP Scripting Engine (NSE)**. Grazie ad essa, è possibile eseguire piccoli script per automatizzare alcuni task di rete. Dalla directory `/usr/share/nmap/scripts` scelgo di utilizzare **smb-os-discovery.nse** il cui scopo è provare a determinare la versione dell'os di un sistema target a partire dal banner del servizio SMB, e lo eseguo con il comando

**nmap 192.168.90.101 --script smb-os-discovery**

```
(kali㉿kali)-[/usr/share/nmap/scripts] ~ at 2022-11-23 21:35 CET
$ nmap 192.168.90.101 --script smb-os-discovery
Starting Nmap 7.93 ( https://nmap.org ) at 2022-11-23 21:35 CET
Nmap scan report for 192.168.90.101
Host is up (0.013s latency).

Nmap done: 1 IP address (1 host up) scanned in 14.23 seconds
```

## 2. OS Fingerprint su Windows 7

Proviamo ad eseguire questa scansione su Windows 7, ma senza prima impostare una policy sul Firewall che permetta il traffico TCP proveniente da Kali, i risultati sono i seguenti:

```
(kali㉿kali)-[~/Desktop]
$ sudo nmap -O 192.168.50.102
Starting Nmap 7.93 ( https://nmap.org ) at 2022-11-23 10:24 EST
Nmap scan report for 192.168.50.102
Host is up (0.00095s latency).
All 1000 scanned ports on 192.168.50.102 are in ignored states.
Not shown: 1000 filtered tcp ports (no-response)
MAC Address: 08:00:27:C8:46:D5 (Oracle VirtualBox virtual NIC)
Too many fingerprints match this host to give specific OS details
Network Distance: 1 hop
```

Procediamo dunque a creare tale policy dalle impostazioni del Firewall in Windows 7.

Adesso riproviamo la scansione eseguendo il comando **sudo nmap -O 192.168.50.102**

```

(kali@kali)-[~/Desktop]
└─$ sudo nmap -O 192.168.50.102
Starting Nmap 7.93 ( https://nmap.org ) at 2022-11-23 12:30 EST
Nmap scan report for 192.168.50.102
Host is up (0.0011s latency).
Not shown: 990 filtered tcp ports (no-response)
PORT      STATE SERVICE
135/tcp    open  msrpc
139/tcp    open  netbios-ssn
445/tcp    open  microsoft-ds
5357/tcp   open  wsddapi
49152/tcp  open  unknown
49153/tcp  open  unknown
49154/tcp  open  unknown
49155/tcp  open  unknown
49156/tcp  open  unknown
49157/tcp  open  unknown
MAC Address: 08:00:27:C8:46:D5 (Oracle VirtualBox virtual NIC)
Warning: OSScan results may be unreliable because we could not find at least 1 open and 1 closed port
Device type: general purpose|specialized|phone
Running: Microsoft Windows 2008|8.1|7|Phone|Vista
OS CPE: cpe:/o:microsoft:windows_server_2008:r2 cpe:/o:microsoft:windows_8.1 cpe:/o:microsoft:windows_7 cpe:/o:microsoft:windows_vista
OS details: Microsoft Windows Server 2008 R2 or Windows 8.1, Microsoft Windows 7 Professional or Windows 8, Microsoft Windows Embedded Standard 7, Microsoft Windows Phone 7.5 or 8.0, Microsoft Windows Vista SP0 or SP1, Windows Server 2008 SP1, or Windows 7, Microsoft Windows Vista SP2, Windows 7 SP1, or Windows Server 2008
Network Distance: 1 hop

```

Come si può notare, la scansione adesso restituisce un'analisi dello stato delle porte – le 1000 più note, come da impostazione di default – più un guess di quale potrebbe essere il sistema operativo in uso dalla macchina, ipotizzando tra 5 OS (Windows 2000, Windows 8.1, Windows 7, Windows Phone e Windows Vista). Per provare a restringere il campo ed ottenere un feedback più fedele, eseguiamo di nuovo il fingerprint, ma cambiando alcuni parametri:

- Il **Timing**, ossia l'intervallo di tempo tra una richiesta TCP SYN e l'altra, affinché il Firewall non sia subissato di richieste che spesso possono essere interpretate come anomale e quindi bloccate
- La **porta sorgente** (source port), affinché la richiesta possa risultare proveniente da una porta nota (le scansioni hanno come impostazione di default l'invio di richieste TCP provenienti da porte randomizzate e non note) e quindi interpretabile come sicura dal Firewall

Proviamo quindi ad eseguire un OS fingerprint con timing **T2 (polite scan)**. Il timing di default per le scansioni nmap è T3, quindi parliamo di una scansione un po' più lenta rispetto alle tempistiche standard. Eseguiamo il comando

**sudo nmap -O -T2 192.168.50.102**

```

(kali@kali)-[~/Desktop]
└─$ sudo nmap -O -T2 192.168.50.102
Starting Nmap 7.93 ( https://nmap.org ) at 2022-11-23 10:28 EST
Nmap scan report for 192.168.50.102
Host is up (0.0011s latency).
Not shown: 990 filtered tcp ports (no-response)
PORT      STATE SERVICE
135/tcp    open  msrpc
139/tcp    open  netbios-ssn

Network Distance: 1 hop

OS detection performed. Please report any incorrect results at https://nmap.org/submit/ .
Nmap done: 1 IP address (1 host up) scanned in 21.71 seconds
```

Questa volta la scansione suggerisce 4 possibili OS: uno in più rispetto alla precedente scansione con timing T2, ma uno in meno rispetto alla prima scansione con parametri di timing e source port invariati.

Impostando come source port la **80** (http), otteniamo invece lo stesso risultato della scansione con timing T2: la eseguiamo con il comando **sudo nmap -O 192.168.50.102 --source-port 80**

```
(kali㉿kali)-[~/Desktop]
└─$ sudo nmap -O 192.168.50.102 --source-port 80
[sudo] password for kali:
Starting Nmap 7.93 ( https://nmap.org ) at 2022-11-23 12:28 EST
Nmap scan report for 192.168.50.102

Nmap done: 1 IP address (1 host up) scanned in 20.60 seconds
```

Proviamo adesso a ripetere la scansione mantenendo la stessa source port ma settando il timing a **T1** (*sneaky scan*):

**sudo nmap -O -T1 192.168.50.102 --sourceport 80**

```

(kali@kali)-[~/Desktop]
└─$ sudo nmap -O -T1 192.168.50.102 --source-port 80
Starting Nmap 7.93 ( https://nmap.org ) at 2022-11-23 12:42 EST
Nmap scan report for 192.168.50.102
Host is up (0.0016s latency).

one 7.5 or 8.0, Microsoft Windows Vista SP0 or SP1, Windows Server 2008 SP1, or Windows 7, Microsoft Windows Vista SP2, Windows 7 SP1, or Windows Server 2008
Network Distance: 1 hop

OS detection performed. Please report any incorrect results at https://nmap.org/submit/ .
Nmap done: 1 IP address (1 host up) scanned in 33494.67 seconds

```

Come si vede, in questo caso il timing della scansione ridotto a T1 non ha prodotto una maggiore precisione nei risultati ottenuti.

Ne ricaviamo che per questo test è consigliato impostare il timing a T2 o cambiare solo la source port in 80, poiché questi due settaggi producono nella scansione gli stessi risultati che si avrebbero disattivando completamente il Firewall, come verificato nelle figure seguenti:

## Customize settings for each type of network

You can modify the firewall settings for each type of network location that you use.

What are network locations?

Home or work (private) network location settings

☐ Turn on Windows Firewall

☐ Block all incoming connections, including those in the list of allowed programs

☒ Notify me when Windows Firewall blocks a new program

☒ Turn off Windows Firewall (not recommended)

Public network location settings

☐ Turn on Windows Firewall

☐ Block all incoming connections, including those in the list of allowed programs

☒ Notify me when Windows Firewall blocks a new program

☒ Turn off Windows Firewall (not recommended)

```

(kali@kali)-[~/Desktop]
└─$ sudo nmap -O 192.168.50.102
